Pathology Report

Patient ID : 1861802260972 /211730723

: Bishnu Upadhaya

Age / Sex : 31 years / Male

Ref. By

Name

Ora : DIRECT Bill Date

Primary Sample

: 24/07/2021, 12:57 PM

Collection Time : 24/07/2021, 12:57 PM

Completion Time

: 24/07/2021, 08:46 PM : Nasopharyngeal &

Oropharyngeal

Investigations Result(s)

COVID 19 RT PCR (NUCLEIC ACID AMPLIFICATION, QUALITATIVE)

COVID-19 Screening (Nucleic Acid Amplification, Qualitative)

NEGATIVE

ICMR Reg No.: ULDCGA

Positive test for SARS-CoV-2 confirms the diagnosis of COVID-19.

Test Indications:

Individuals with suspected COVID-19 infection (As per WHO 'Case Definition' -

https://www.who.int/publicationsdetail/global-surveillance-for-humaninfection-with-novel-coronavirus-(2019- nCoV).

Clinical Significance:

COVID 19 could be asymptomatic or present with symptoms of fever, cough, shortness of breath. Severe cases could lead to pneumonia, severe acute respiratory syndrome and sometimes death. One should seek medical advice if a symptomatic patient has been in close contact with a person known to have COVID-19 or live in or have recently traveled from an area with ongoing spread of COVID-19. COVID-19 is declared as a pandemic but need to be controlled by early diagnosis and following standard and droplet precautions to prevent transmission.

Limitations of the Assay:

One or more negative results does not rule out the possibility of COVID-19 virus infection. A number of factors could lead to a negative result in an infected individual, including poor quality of the specimen, low sample volume, timing of specimen collection (late or very early in the infection), inappropriate sample handling and shipping, inherent technical reasons like virus mutation or PCR inhibition.

Disclaimer:

- 1. Incubation period for SARS-CoV-2 infection ranges from 1 to 14 days, and clinical symptoms usually manifest within 5 days.
- 2. If a negative result is obtained from a patient with a high index of suspicion for COVID-19 virus infection, particularly when only upper respiratory tract specimens were collected, additional specimens, from the lower respiratory tract if possible, should be collected and tested.
